

The heatmap displays the relationship between Population Risk Sensitivity (x-axis) and Training Horizon (days) (y-axis). The color scale ranges from light yellow (low) to dark red (high). The highest values (dark red) are concentrated at low training horizons (5-10 days) and low population risk sensitivity (0.01-0.05). As the training horizon increases, the values generally decrease, becoming lighter yellow or white. The x-axis ranges from 0.01 to 0.1, and the y-axis ranges from 5 to 35 days.
